Contents

1 Introduction 1

2 The State Quantities and the Quantities Describing the Evolution ... 3
2.1 The State Quantities 3
2.2 The Quantities Which Describe the Evolution and the Thermal Heterogeneity 4

3 The Basic Laws of Mechanics 5
3.1 The Principle of Virtual Power 5
3.2 The Laws of Thermodynamics 8
3.2.1 The Energy Balance 8
3.2.2 The Second Law of Thermodynamics 9
3.2.3 The Free Energy 9
3.2.4 Equivalent Laws of Thermodynamics 9
3.2.5 The Entropy Balance Equivalent to the Energy Balance 10
3.2.6 An Equivalent Second Law of Thermodynamics 11
3.3 The Constitutive Laws 11
3.3.1 An Extra State Quantity 13
3.4 Internal Constraints 13
3.4.1 Constitutive Laws in Case There Are Internal Constraints on the State Quantities 15
3.4.2 Some Notations 19
3.5 The Basic Laws of Mechanics on a Discontinuity Surface 19
3.6 The Basic Laws of Mechanics in a Discontinuity Volume 24
3.6.1 The Principle of Virtual Power and the Equations of Motion 24
3.6.2 The Laws of Thermodynamics 25

4 Solid–Liquid Phase Change 31
4.1 The Stefan Problem 31
4.1.1 The Equations 33

	4.1.2	A Way to Solve the Equations Where the Free Boundary Is a By-Product: The Freezing Index	34
4.2	Examples		36
4.3	Unfrozen Water in the Frozen Zone		36
	4.3.1	The Equations	38
	4.3.2	An Example	39
4.4	Phase Change with a Freezing Fringe		40
	4.4.1	The Equations	40
4.5	Phase Change with Voids and Bubbles		41
	4.5.1	The Equations	45
	4.5.2	The Case Where There Is Only Liquid: The Cavitation Phenomenon	45
	4.5.3	The Case There Is Only Solid: Soil Mechanics	46
	4.5.4	Numerical Examples	47
	4.5.5	Example 1: The Cavitation Phenomenon	48
	4.5.6	Example 2: The Non Dissipative Spatial Interaction Is Important	48
	4.5.7	Example 3: No Spatial Interaction	48
	4.5.8	Example 4: Dissipative Phase Change	50
	4.5.9	Example 5: Non Dissipative Phase Change	50
	4.5.10	Example 6: Effect of the Pressure	51
4.6	Solid–Liquid Phase Change with Different Densities		53
	4.6.1	The Mass Balance	53
	4.6.2	The Equations of Motion	53
	4.6.3	The Entropy Balance	54
	4.6.4	The Constitutive Laws	54
	4.6.5	Approximation of the Equation for the Macroscopic Motions	56
	4.6.6	The Equations for the Phase Change	56
	4.6.7	An Example: Liquid Water in an Impermeable Container	58
	4.6.8	An Other Example: Ice in an Impermeable Container	59
	4.6.9	An Other Example: Freezing of a Water Emulsion in an Impermeable Container	61
	4.6.10	The Non Homogeneous Evolution	61
	4.6.11	The Motion of Glaciers	62
4.7	Dissipative and Irreversible Phase Change		62
	4.7.1	The Equations	63
4.8	The Phase Volume Fraction Depends on the Temperature		63
	4.8.1	The Equations	64
4.9	Phase Change with Thermal Memory		65
	4.9.1	The Equations	65

5 Shape Memory Alloys 67
5.1 Introduction 67
5.2 The State Quantities 67
5.3 The Equations of Motion 68
5.3.1 The Equations for the Microscopic Motions When Voids and Interpenetration Are Possible 68
5.4 Shape Memory Alloys When Voids and Interpenetration Are Impossible 69
5.4.1 The Entropy Balance 70
5.4.2 The Free Energy 70
5.4.3 The Constitutive Laws 74
5.4.4 An Example of Non Dissipative Evolution 76
5.4.5 Latent Heat of Austenite–Martensite Phase Change 77
5.4.6 The Dissipative Constitutive Laws 78
5.4.7 Evolution of a Shape Memory Alloy 79
5.5 Education of Shape Memory Alloys 80
5.5.1 The Two-Shape Memory Effect 82
5.5.2 A Predictive Theory of the Education of Shape Memory Alloys 84
5.6 Shape Memory Alloys with the Possibility of Voids 91
5.6.1 The State Quantities 92
5.6.2 The Mass Balance 92
5.6.3 The Equations of Motion 93
5.6.4 The Free Energy 93
5.6.5 The Pseudopotential of Dissipation 95
5.6.6 The Constitutive Laws 96
5.6.7 The Entropy Balance 98
5.6.8 The Set of Partial Differential Equations 99
5.7 Conclusion 99

6 Damage 101
6.1 The Equations of Motion 102
6.2 Free Energy and Pseudopotential of Dissipation 102
6.3 The Equations 103
6.4 The Macroscopic Motions Become Microscopic 104
6.5 An Example: The Wedge Splitting Test 107

7 Contact with Adhesion 109
7.1 The Equations of Motion 110
7.2 The Constitutive Laws 111
7.3 The Equations 112
7.4 Examples 113

8 Damage of Solids Glued on One Another: Coupling of Volume and Surface Damages 115
8.1 State Quantities and Quantities Describing the Evolution 115
8.2 Equations of Motion 116
8.2.1 Virtual Power of the Interior Forces 116
8.2.2 Virtual Power of the Exterior Forces 118
8.2.3 Virtual Power of the Acceleration Forces 118
8.2.4 The Principle of Virtual Power 118
8.2.5 The Equations of Motion 119
8.3 The Constitutive Laws 119
8.4 The Equations 122
8.4.1 On the Contact Surface 122
8.4.2 In the Domains 123
8.5 Examples 124
8.5.1 Four Points Bending 124
8.5.2 Pull Test 126
8.5.3 Fibre-Reinforced Polymers-Concrete Delamination ... 127

9 Phase Change with Discontinuity of Temperature: Warm Water in Contact with Cold Ice 131
9.1 Warm Water in Contact with Cold Ice 131
9.2 Mixture of Ice and Water in Contact with Cold Ice 133
9.3 An Example: Rain Falling on a Frozen Ground 134
9.3.1 A Dissipative Behaviour 136

10 Phase Change and Collisions 141
10.1 Collisions of Two Balls: The Mechanical Theory 141
10.1.1 The Velocities of Deformation 142
10.1.2 The Principle of Virtual Work 143
10.1.3 The Virtual Works 144
10.1.4 The Equations of Motion 145
10.1.5 An Example of Collisions: The Equations for U^+ 147
10.1.6 An Other Example: The Impenetrability Condition 150
10.2 Collisions of Two Balls: The Thermal Phenomenon 153
10.2.1 First Law of Thermodynamics for a Point 154
10.2.2 Second Law of Thermodynamics for a Point 154
10.2.3 A Useful Inequality for a Point 155
10.2.4 The First Law for the System 155
10.2.5 The Second Law for the System 156
10.2.6 A Useful Inequality for the System 157
10.2.7 The Constitutive Laws 158
10.2.8 An Example of Thermal Effects Due to Collisions 159
10.3 Experimental Results 162

10.4 The Thermomechanical Theory Involving Phase Change 163
10.4.1 The Equations of Motion 163
10.4.2 The Laws of Thermodynamics for Each Ball 165
10.4.3 The Laws of Thermodynamics for the System 168
10.4.4 The Constitutive Laws 172
10.5 Examples of Thermal Effects with Phase Changes 174
10.5.1 The Thermal Equations in the Isentropic Case 176
10.5.2 The Thermal Equations in the Adiabatic Case 177
10.5.3 The Adiabatic Situation with the Small Perturbation Assumption 177
10.5.4 Identical Balls at the Same Temperature Before the Collision 179
10.5.5 Identical Balls at Different Temperatures Before the Collision: Collision of Two Pieces of Ice 181
10.5.6 Identical Balls at Different Temperatures Before the Collision: Collision of a Droplet of Water with a Piece of Ice 189
10.5.7 A Droplet of Rain Falls on a Frozen Ground: Does It Give Black Ice? 190

11 Collisions of Deformable Bodies and Phase Change 193
11.1 The Principle of Virtual Work 193
11.2 The First Law of Thermodynamics 195
11.3 The Second Law of Thermodynamics 202
11.4 The Constitutive Laws 204
11.5 Evolution in a Collision 207
11.5.1 The Mechanical Evolution When Decoupled from the Thermal Evolution 209
11.5.2 An Example: Collision of a Bar with a Rigid Support 210
11.5.3 Thermal Evolution When the Mechanical Equations Are Decoupled from the Thermal Equations 211
11.5.4 The Temperature Variation in a Collision 214

12 Phase Change Depending on a State Quantity: Liquid–Vapor Phase Change 217
12.1 The Temperature Is Lower than Critical Temperature T_c 218
12.1.1 Partial Phase Change 221
12.2 The Temperature Is Larger than Critical Temperature T_c 221

13 Clouds: Mixture of Air, Vapor and Liquid Water 223
13.1 The Temperature Is Lower than Critical Temperature T_c 223
13.2 State Quantities 223

13.3 Quantities Which Describe the Evolution and the Thermal Heterogeneity 224
13.3.1 Classical and Generalized Deformation Velocities 225
13.3.2 Thermal Heterogeneity 225
13.4 Mass Balances 226
13.5 Equations of Motion 227
13.5.1 The Power of the Interior Forces 227
13.5.2 The Power of the Acceleration Forces 228
13.5.3 Power of the Exterior Forces 229
13.5.4 The Equations of Motion 230
13.6 Entropy Balance 231
13.6.1 The Energy Balance 231
13.6.2 The Second Law 233
13.6.3 The Free Energies 234
13.6.4 The Entropy Balance 238
13.7 The Second Law: An Equivalent Formulation 240
13.8 Pseudopotential of Dissipation 240
13.8.1 Internal Constraints on the Velocities 241
13.8.2 The Pseudopotential of Dissipation 241
13.9 Constitutive Laws 242
13.9.1 The Dissipative Internal Forces 242
13.9.2 The Constitutive Laws 243
13.9.3 Consequences of the Constitutive Laws 244
13.10 The Equations of the Predictive Theory 245
13.10.1 A Potential and the Free Enthalpy 249
13.11 Air, Liquid Water and Vapor in an Homogeneous Cloud 251
13.11.1 The Air, Liquid Water, Vapor Mixture 251
13.11.2 The Cloud Pressure 252
13.11.3 The Liquid Water 253
13.11.4 The Air, Vapor Mixture 255
13.12 A Schematic Example in Case There Is No Air 256
13.12.1 The Specific Entropies and the Specific Phase Change Latent Heat 259
13.13 Case Where Vapor, Liquid Water and Air Velocities Are Equal 260
13.14 Case Where Air Velocity Is Null, Vapor and Liquid Velocities Are Equal and Small 261
13.14.1 The Example 262
13.14.2 The Equations When the Temperature Is Known 264
13.15 The Temperature Is Larger than Critical Temperature T_c 265
13.15.1 An Homogeneous Cloud 266
13.15.2 The Example: The Different Temperature-Specific Volume Domains 266
13.16 Solid–Solid and Solid–Gas Phase Changes 268

14 Conclusion 269

A Some Elements of Convex Analysis 271
A.1 Convex Sets 271
A.2 Convex Functions 271
A.2.1 Examples of Convex Functions 272
A.3 Linear Spaces in Duality 273
A.3.1 Examples of Linear Spaces in Duality 273
A.4 Subgradients and Subdifferential Set of Convex Functions 274
A.4.1 Two Properties of the Subdifferential Set 275
A.4.2 Examples of Subdifferential Sets 276
A.5 Dual Functions 278
A.5.1 The Internal Energy, Potential G and Free Enthalpy ... 278
A.6 Concave Functions 279
A.6.1 Example of Concave Functions 280

B The Small Perturbation Assumption 281
B.1 Assumptions on the Displacement and on Mechanical Quantities 281
B.1.1 The Surface Normal Vector 284
B.2 Assumptions on the Exterior Forces: The Choice of the Small Perturbation Equations 285
B.3 The Mass Balance 285
B.4 The Equations of Motion 286
B.4.1 The Equation for the Macroscopic Motion 286
B.4.2 The Equation for the Microscopic Motion: The Classical Case 287
B.4.3 The Equation for the Microscopic Motion: The Non Classical Case 288
B.5 The Entropy Balance 289
B.6 The Constitutive Laws 289
B.7 Example 1: The Stefan Problem 290
B.8 Example 2: The Damage Predictive Theory 291
B.8.1 Some Numbers for the Equation for the Microscopic Motion 292
B.9 A Practical Rule 293
B.10 Advantages and Disadvantages of the Small Perturbation Assumption 293
