1	What is sol-gel and nanotechnology?.....	13
1.1	Definitions	13
1.2	Historical and actual facts	15
1.2.1	Nanotechnology as part of our daily life.....	16
1.3	Nanotechnology in the development of paints and coatings.....	18
2	Synthesis of nanomaterials	19
2.1	Top-down processes	20
2.2	Bottom-up processes	22
2.2.1	Nanoparticles synthesized by gas phase processes	24
2.2.2	Nanoparticles synthesized by wet chemical methods.....	24
2.2.2.1	Ostwald ripening.....	28
2.2.2.2	Hydrolysis	29
2.2.2.3	Controlled precipitation and peptisation	30
2.2.2.4	Ion exchange	31
2.2.2.5	High temperature liquid phase synthesis of nanoparticle.....	32
2.2.2.6	Electrolysis	33
2.2.2.7	Micro emulsion processes	34
2.3	Commercial sources of nanoparticles	34
3	Properties and processing of nanoparticles	35
3.1	Agglomeration of nanoparticles.....	36
3.2	Shear thinning - useful agglomerates	37
3.3	Stabilization of nanoparticles against agglomeration	40
3.3.1	Electrostatical stabilization	41
3.3.2	Sterical stabilization.....	46
3.3.2.1	Redispersable nanopowders	56
3.3.3	Electrosterical stabilization	59
3.4	Nanoparticles in coating resins	59
3.4.1	Organic resins	60
3.4.2	Waterborne organic binders	63
4	Application of nanoparticles in paints and coatings	71
4.1	Color and light	72
4.1.1	Hiding power, transparency and particle size	72

4.1.2	Nanoscaled pigments.....	73
4.1.3	Interference pigments.....	76
4.1.4	IR absorption.....	77
4.1.5	UV absorption.....	78
4.2	Improving the scratch resistance of coatings	82
5	Coating resins made by nanotechnology – the sol-gel process	91
5.1	Inorganic networks.....	94
5.1.1	Hydrolysis and condensation	94
5.1.2	Catalysts for hydrolysis and condensation.....	95
5.1.3	Sources of water in sol-gel reactions	100
5.1.4	Water-free sol-gel techniques	100
5.1.5	Solvents	102
5.1.6	Metal compounds in the sol-gel process.....	103
5.1.6.1	Silane/metal-oxide mixed systems.....	107
5.2	Network modifiers	109
5.2.1	Polysilsesquioxanes/POSS	111
5.3	Organic network formers	115
5.3.1	Organofunctional silanes	115
5.3.2	Alkoxysilane-functionalized coating resins.....	118
5.4	Formulation of sol-gel coatings.....	122
5.4.1	Solvent-based formulations.....	122
5.4.2	Waterborne formulations.....	124
5.4.3	Storage stability of sol-gel formulations	126
5.4.4	Sol-gel powder coatings.....	127
5.4.5	Additives for sol-gel formulations	129
5.4.6	Compatibility with organic resins.....	130
6	Application, drying and densification	133
6.1	Pre-treatment of surfaces.....	133
6.2	Coatings with sol-gel materials	135
6.3	Sol-gel coatings – examples	139
6.3.1	High temperature resistant coatings	139
6.3.2	Colored and pigmented sol-gel coatings.....	150
6.3.2.1	Inorganic pigments.....	150
6.3.2.2	Organic pigments and dyes	153
6.4	Structured sol-gel coatings.....	153
6.5	Scratch resistant coatings.....	155
6.5.1	Abrasion resistance	159
6.6	Easy-to-clean/anti-adhesive coatings	160
6.7	Anti-fingerprint coatings	176
6.8	Hydrophilic coatings.....	179
6.8.1	Superhydrophilic coatings.....	183
6.9	Tailoring of the refractive index of sol-gel coatings.....	186
6.10	Anti-corrosion coatings	190
6.11	Coatings with antistatic action.....	194
6.12	Antibacterial coatings.....	196
6.13	Barrier coatings.....	198
6.13.1	Pigments	201
7	Health, safety and environmental aspects of nanoparticles	202

8	Resume	204
9	List of Examples	205
10	Literature.....	207
