

Contents

1	Stochastic Optimization Methods	1
1.1	Introduction	1
1.2	Deterministic Substitute Problems: Basic Formulation	3
1.2.1	Minimum or Bounded Expected Costs	4
1.2.2	Minimum or Bounded Maximum Costs (Worst Case)	6
1.3	Optimal Decision/Design Problems with Random Parameters	7
1.4	Deterministic Substitute Problems in Optimal Decision/Design	12
1.4.1	Expected Cost or Loss Functions	13
1.5	Basic Properties of Deterministic Substitute Problems	16
1.6	Approximations of Deterministic Substitute Problems in Optimal Design/Decision	18
1.6.1	Approximation of the Loss Function	18
1.6.2	Approximation of State (Performance) Functions	21
1.6.3	Taylor Expansion Methods	24
1.7	Approximation of Probabilities: Probability Inequalities	28
1.7.1	Bonferroni-Type Inequalities	28
1.7.2	Tschebyscheff-Type Inequalities	30
2	Optimal Control Under Stochastic Uncertainty	37
2.1	Stochastic Control Systems	37
2.1.1	Random Differential and Integral Equations	39
2.1.2	Objective Function	45
2.2	Control Laws	49
2.3	Convex Approximation by Inner Linearization	52
2.4	Computation of Directional Derivatives	57
2.5	Canonical (Hamiltonian) System of Differential Equations/Two-Point Boundary Value Problem	67
2.6	Stationary Controls	69
2.7	Canonical (Hamiltonian) System of Differential	71

2.8	Computation of Expectations by Means of Taylor Expansions	73
2.8.1	Complete Taylor Expansion	74
2.8.2	Inner or Partial Taylor Expansion	75
3	Stochastic Optimal Open-Loop Feedback Control	79
3.1	Dynamic Structural Systems Under Stochastic Uncertainty	79
3.1.1	Stochastic Optimal Structural Control: Active Control	79
3.1.2	Stochastic Optimal Design of Regulators	81
3.1.3	Robust (Optimal) Open-Loop Feedback Control	82
3.1.4	Stochastic Optimal Open-Loop Feedback Control	82
3.2	Expected Total Cost Function	84
3.3	Open-Loop Control Problem on the Remaining Time Interval $[t_h, t_f]$	85
3.4	The Stochastic Hamiltonian of (3.7a–d)	85
3.4.1	Expected Hamiltonian (with Respect to the Time Interval $[t_h, t_f]$ and Information $\mathfrak{A}_{t_h}$)	86
3.4.2	H -Minimal Control on $[t_h, t_f]$	86
3.5	Canonical (Hamiltonian) System	87
3.6	Minimum Energy Control	88
3.6.1	Endpoint Control	89
3.6.2	Endpoint Control with Different Cost Functions	93
3.6.3	Weighted Quadratic Terminal Costs	95
3.7	Nonzero Costs for Displacements	98
3.7.1	Quadratic Control and Terminal Costs	100
3.8	Stochastic Weight Matrix $Q = Q(t, \omega)$	103
3.9	Uniformly Bounded Sets of Controls $D_t, t_0 \leq t \leq t_f$	107
3.10	Approximate Solution of the Two-Point Boundary Value Problem (BVP)	112
3.11	Example	115
4	Adaptive Optimal Stochastic Trajectory Planning and Control (AOSTPC)	119
4.1	Introduction	119
4.2	Optimal Trajectory Planning for Robots	121
4.3	Problem Transformation	124
4.3.1	Transformation of the Dynamic Equation	126
4.3.2	Transformation of the Control Constraints	127
4.3.3	Transformation of the State Constraints	128
4.3.4	Transformation of the Objective Function	129
4.4	OSTP: Optimal Stochastic Trajectory Planning	129
4.4.1	Computational Aspects	137
4.4.2	Optimal Reference Trajectory, Optimal Feedforward Control	141

4.5	AOSTP: Adaptive Optimal Stochastic Trajectory Planning	142
4.5.1	(OSTP)-Transformation	146
4.5.2	The Reference Variational Problem	148
4.5.3	Numerical Solutions of (OSTP) in Real-Time	150
4.6	Online Control Corrections: PD-Controller	157
4.6.1	Basic Properties of the Embedding $q(t, \epsilon)$	158
4.6.2	The 1st Order Differential dq	161
4.6.3	The 2nd Order Differential d^2q	168
4.6.4	Third and Higher Order Differentials	172
4.7	Online Control Corrections: PID Controllers	173
4.7.1	Basic Properties of the Embedding $q(t, \epsilon)$	176
4.7.2	Taylor Expansion with Respect to ϵ	177
4.7.3	The 1st Order Differential dq	178
5	Optimal Design of Regulators	195
5.1	Tracking Error	197
5.1.1	Optimal PD-Regulator	198
5.2	Parametric Regulator Models	200
5.2.1	Linear Regulator.....	200
5.2.2	Explicit Representation of Polynomial Regulators	201
5.2.3	Remarks to the Linear Regulator	202
5.3	Computation of the Expected Total Costs of the Optimal Regulator Design	203
5.3.1	Computation of Conditional Expectations by Taylor Expansion	204
5.3.2	Quadratic Cost Functions	206
5.4	Approximation of the Stochastic Regulator Optimization Problem	207
5.4.1	Approximation of the Expected Costs: Expansions of 1st Order.....	209
5.5	Computation of the Derivatives of the Tracking Error.....	216
5.5.1	Derivatives with Respect to Dynamic Parameters at Stage j	217
5.5.2	Derivatives with Respect to the Initial Values at Stage j	221
5.5.3	Solution of the Perturbation Equation	224
5.6	Computation of the Objective Function	230
5.7	Optimal PID-Regulator.....	233
5.7.1	Quadratic Cost Functions	235
5.7.2	The Approximate Regulator Optimization Problem	250
6	Expected Total Cost Minimum Design of Plane Frames	253
6.1	Introduction	253
6.2	Stochastic Linear Programming Techniques	254
6.2.1	Limit (Collapse) Load Analysis of Structures as a Linear Programming Problem	254
6.2.2	Plane Frames	257

6.2.3	Yield Condition in Case of $M-N$ -Interaction	263
6.2.4	Approximation of the Yield Condition by Using Reference Capacities	270
6.2.5	Asymmetric Yield Stresses	273
6.2.6	Violation of the Yield Condition.....	279
6.2.7	Cost Function	280
7	Stochastic Structural Optimization with Quadratic Loss Functions...	289
7.1	Introduction	289
7.2	State and Cost Functions	292
7.2.1	Cost Functions.....	296
7.3	Minimum Expected Quadratic Costs	299
7.4	Deterministic Substitute Problems.....	304
7.4.1	Weight (Volume)-Minimization Subject to Expected Cost Constraints	304
7.4.2	Minimum Expected Total Costs	306
7.5	Stochastic Nonlinear Programming.....	308
7.5.1	Symmetric, Non Uniform Yield Stresses.....	311
7.5.2	Non Symmetric Yield Stresses	312
7.6	Reliability Analysis.....	315
7.7	Numerical Example: 12-Bar Truss.....	318
7.7.1	Numerical Results: MEC	320
7.7.2	Numerical Results: ECBO	322
8	Maximum Entropy Techniques.....	323
8.1	Uncertainty Functions Based on Decision Problems	323
8.1.1	Optimal Decisions Based on the Two-Stage Hypothesis Finding (Estimation) and Decision Making Procedure	323
8.1.2	Stability/Instability Properties	328
8.2	The Generalized Inaccuracy Function $H(\lambda, \beta)$	331
8.2.1	Special Loss Sets V	334
8.2.2	Representation of $H_\epsilon(\lambda, \beta)$ and $H(\lambda, \beta)$ by Means of Lagrange Duality	342
8.3	Generalized Divergence and Generalized Minimum Discrimination Information	346
8.3.1	Generalized Divergence.....	346
8.3.2	I -, J -Projections	352
8.3.3	Minimum Discrimination Information	353
	References.....	357
	Index.....	365
